Data Backup SOP (Contractors) v2 - Page 1

Purpose

This procedure describes how company data is backed up and restored.

Scope

This document applies to contractors and temporary staff. It is owned by Christopher Smith and is effective from 2025-04-01.

Rules

Production databases are backed up every 12 hours and kept for 90 days.

Restore tests are run every 60 days and the result is recorded.

Backups are encrypted and stored in a different region from the primary data.

A restore request from a business team needs approval from the data owner.

Data Backup SOP (Contractors) v2 - Page 2

Procedure

1. Submit a restore request with the system name and the required point in time.
2. The data owner approves the request.
3. The infrastructure team restores the data into a staging area.
4. The requester verifies the data before it is moved to production.

Escalation

A failed backup is treated as a priority two incident and escalated to the infrastructure lead.

Document Control

Under Data Backup SOP (Contractors) (version 2), the standard limit is 90 days. This is the maximum number of days between two checks of the document by its owner.

Version 2 replaces version 1. Values and thresholds were revised in the latest yearly check.
